

# Trees

Murat Osmanoglu

# Definition

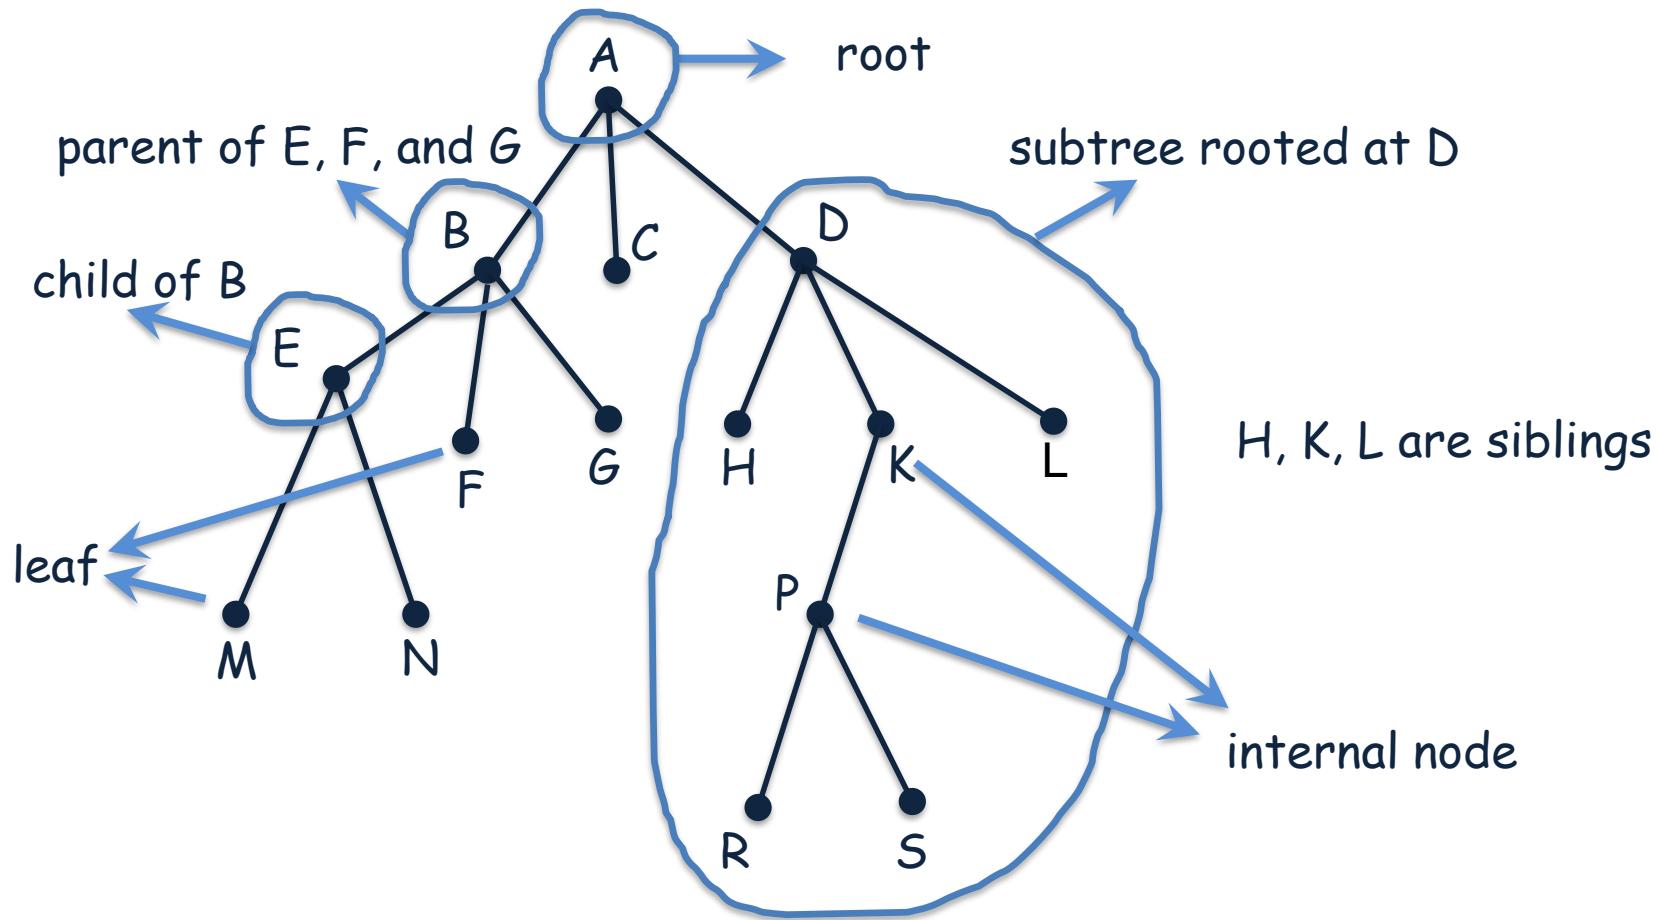

- A tree is a connected undirected graph with no simple circuit

- An undirected graph is a tree if and only if there is a unique simple path between any two of its vertices

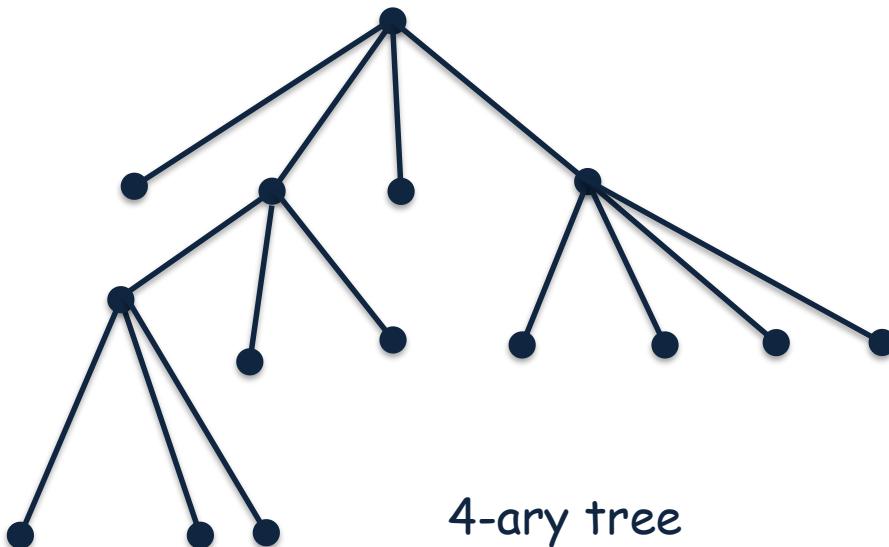

# Definition

- A rooted tree is a tree in which one vertex is fixed as the root and every edge is directed away from the root

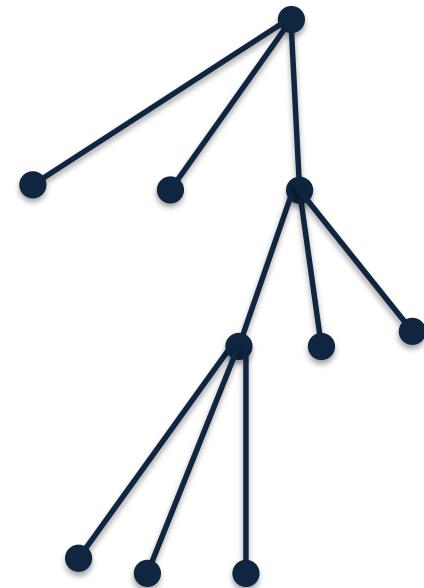

# Definition

- A rooted tree is called m-ary tree if every internal vertex has no more than m children
- It's called a full m-ary tree if every internal vertex has exactly m children

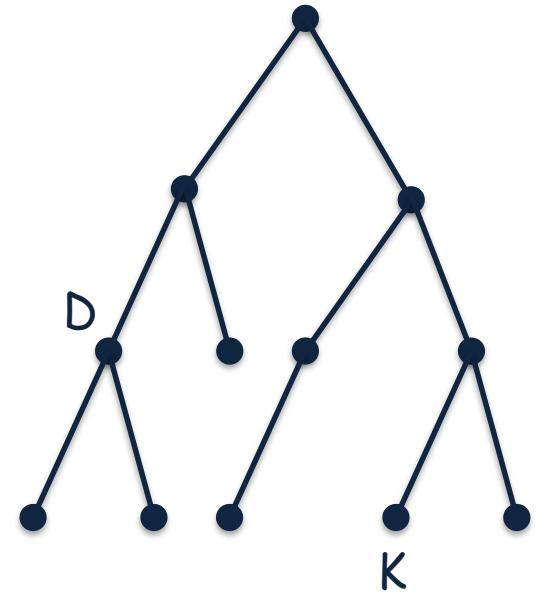

4-ary tree

full 3-ary tree

# Definition

- A tree with  $n$  vertices has  $n - 1$  edges
- A full  $m$ -ary tree with  $i$  internal vertices contains  $n = mi + 1$  vertices
- The level (depth) of a vertex  $v$  in a rooted tree is the length of the unique path from the root to this vertex
- The height of a rooted tree is the length of the longest path from the root to any vertex
- A rooted  $m$ -ary tree of height  $h$  is balanced if all the leaves are at levels  $h$  or  $h - 1$

level of D is 2

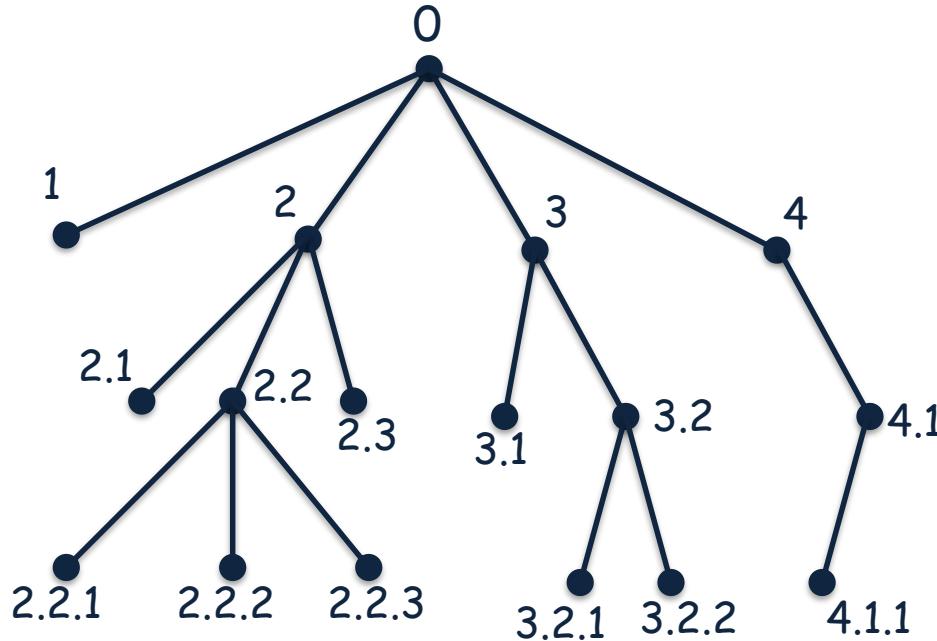

level of K is 3

height of the tree is 3

it's a balanced tree

# Tree Traversal

## Universal Address Systems

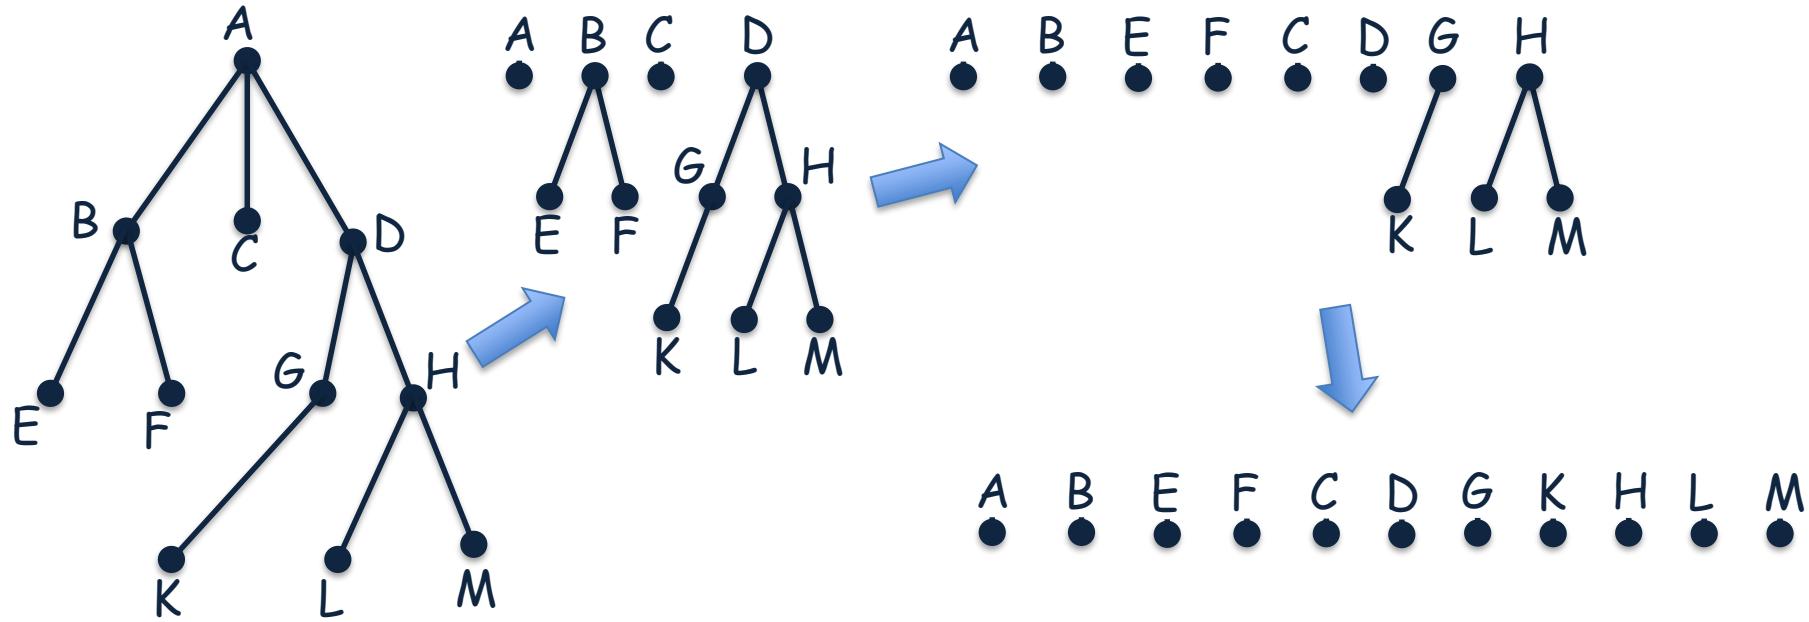

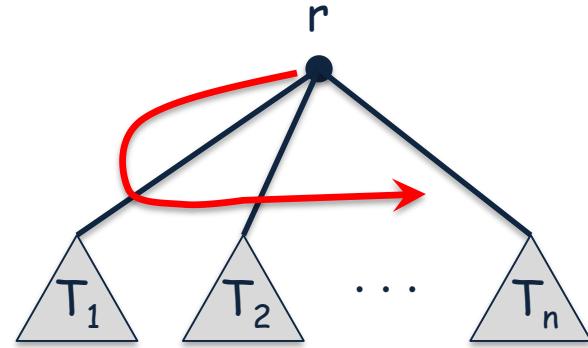

- Label the root with the integer 0, and its  $k$  children with  $1, 2, \dots, k$  from left to right
- For each vertex  $v$  at some level with label  $A$ , label its  $t$  children with  $A.1, A.2, \dots, A.t$  from left to right

# Tree Traversal

## Preorder Traversal

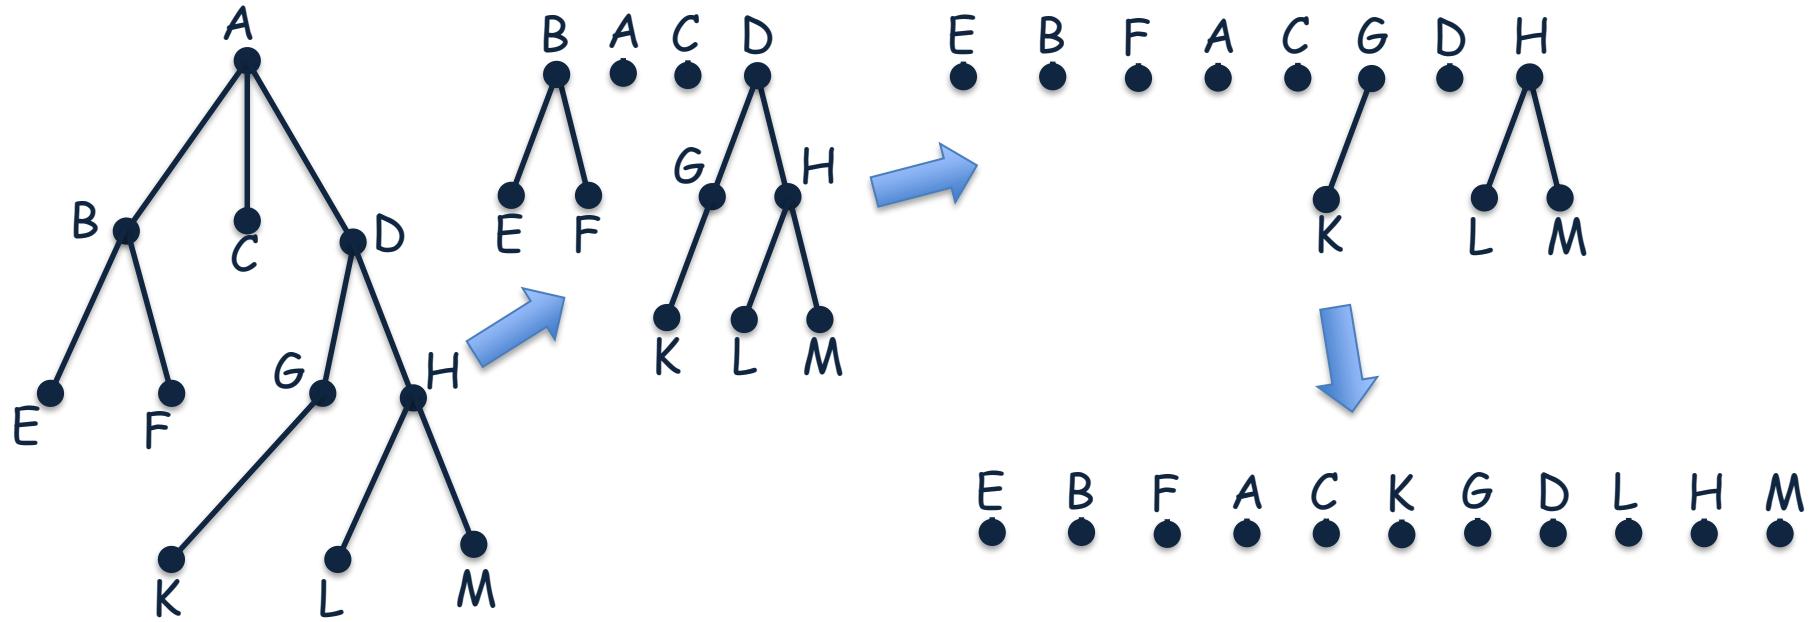

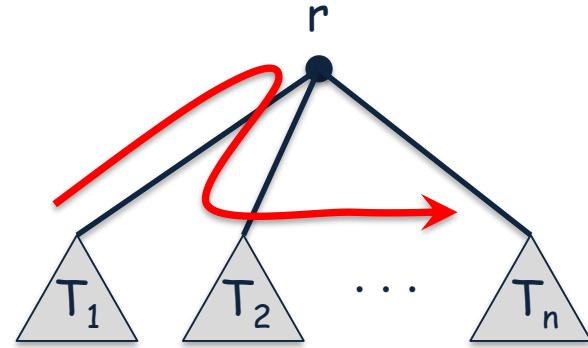

- If the tree consists of  $r$  only, visit  $r$
- otherwise,
  - visit  $r$
  - traverse subtrees from left to right

# Tree Traversal

## Inorder Traversal

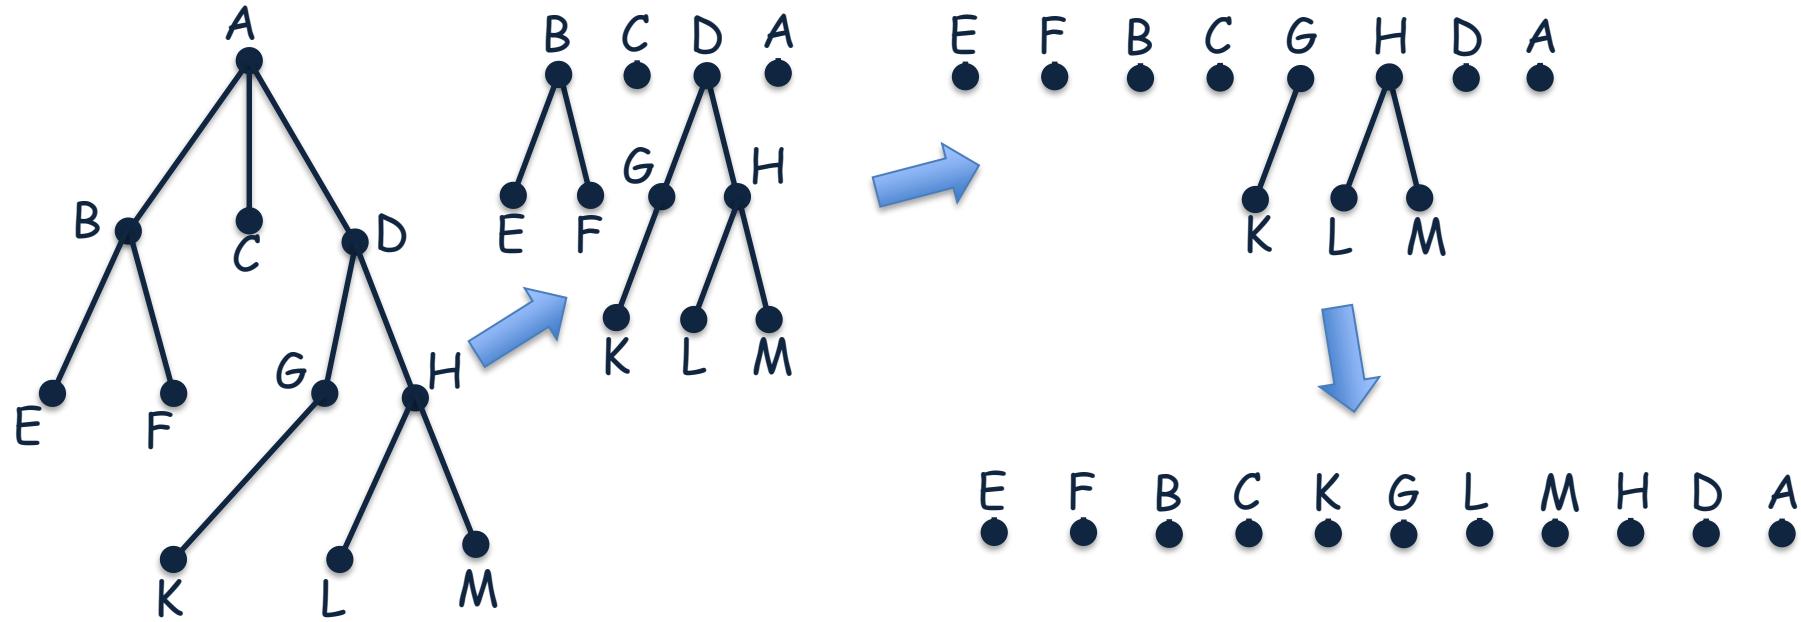

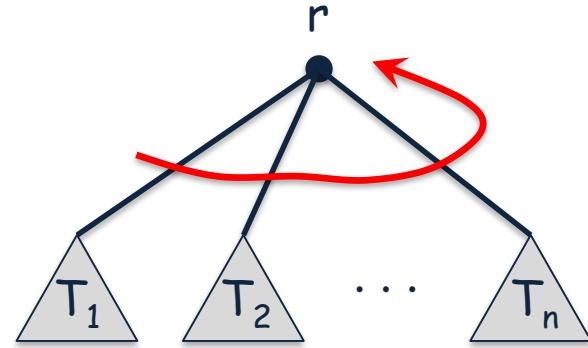

- If the tree consists of  $r$  only, visit  $r$
- otherwise,
  - traverse leftmost subtree
  - visit  $r$
  - traverse the remaining subtrees from left to right

# Tree Traversal

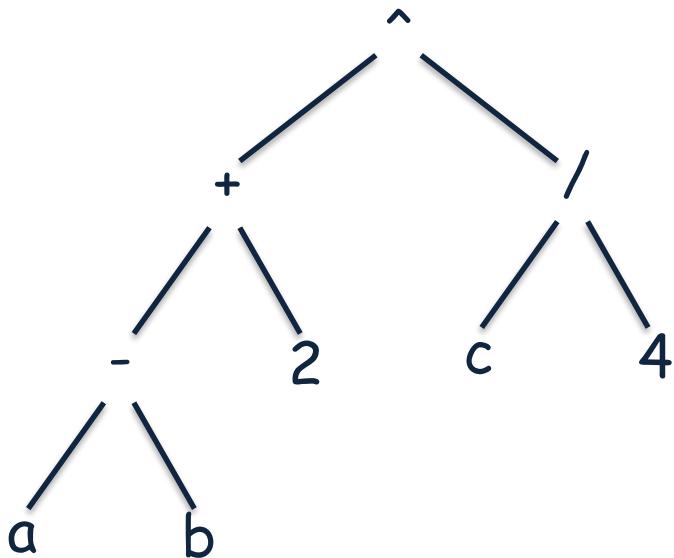

## Postorder Traversal

- If the tree consists of  $r$  only, visit  $r$
- otherwise,
  - traverse subtrees from left to right
  - visit  $r$

# Tree Traversal

## Infix-Prefix-Postfix Notation

- Inorder traversal of the tree  
 $a - b + 2 ^ c / 4$   
infix form of the expression  
 $[(a - b) + 2] ^ (c / 4)$
- Preorder traversal of the tree  
 $^ + - a b 2 / c 4$   
this is also prefix form
- Postorder traversal of the tree  
 $a b - 2 + c 4 / ^$   
this is also postfix form

# Tree Traversal

## Infix-Prefix-Postfix Notation

+ - \* 2 3 5 / ^ 2 3 4

+ - 6 5 / 8 4

+ 1 2

3

7 2 3 \* - 4 ^ 9 3 / +

7 6 - 4 ^ 3 +

1 4 ^ 3 +

# MST

- given a connected undirected graph  $G = (V, E)$  with real-valued edge weight  $w(e)$ , an minimum spanning tree (MST) is a subset of the edges  $T \subseteq E$  such that  $T$  is a tree that connects all vertices of the graphs, and  $T$  has minimum total weight.

$$w(T) = \sum_{e \text{ in } T} w(e)$$

- connecting all computers in an office buildings using least amount of cables

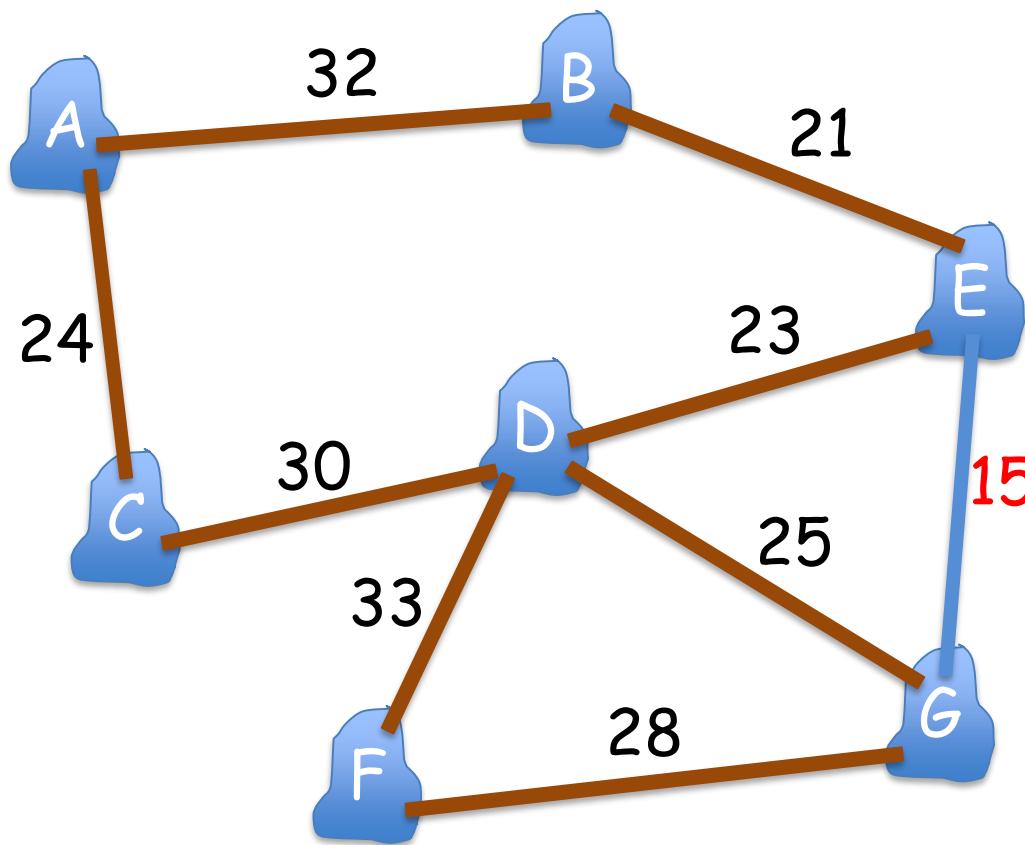

## MST

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

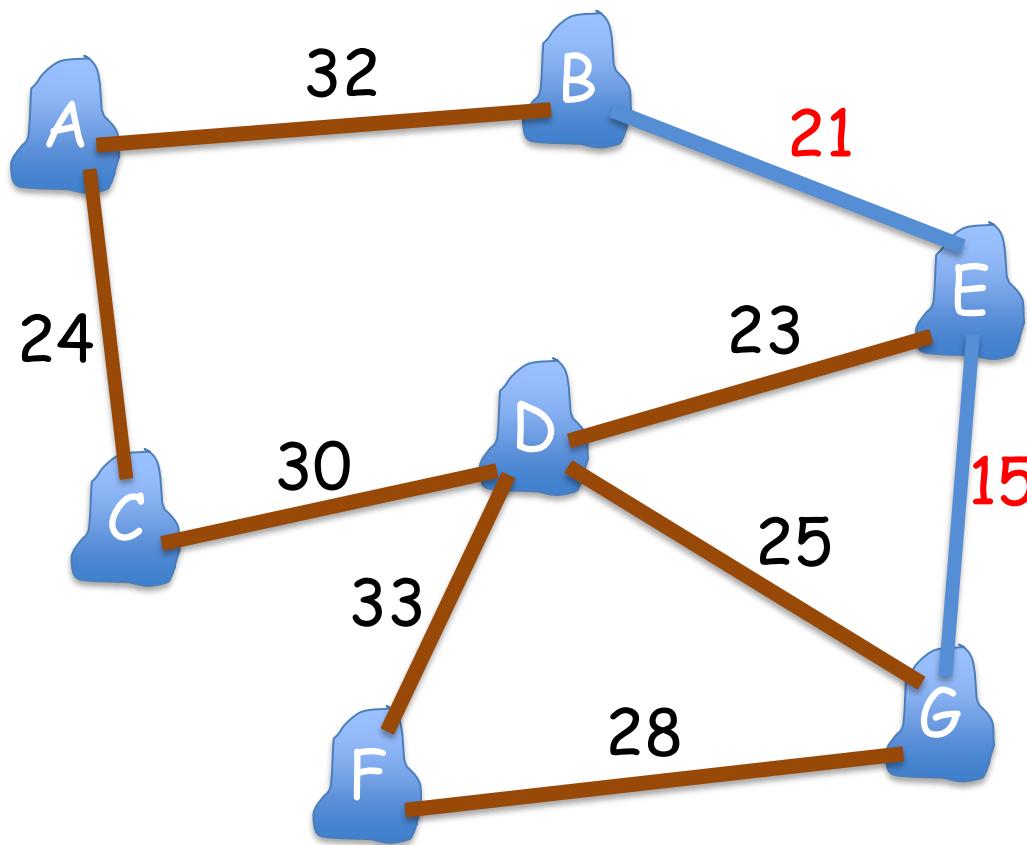

$n-1$  edges enough to connect  $n$  nodes, one more creates a cycle

## MST

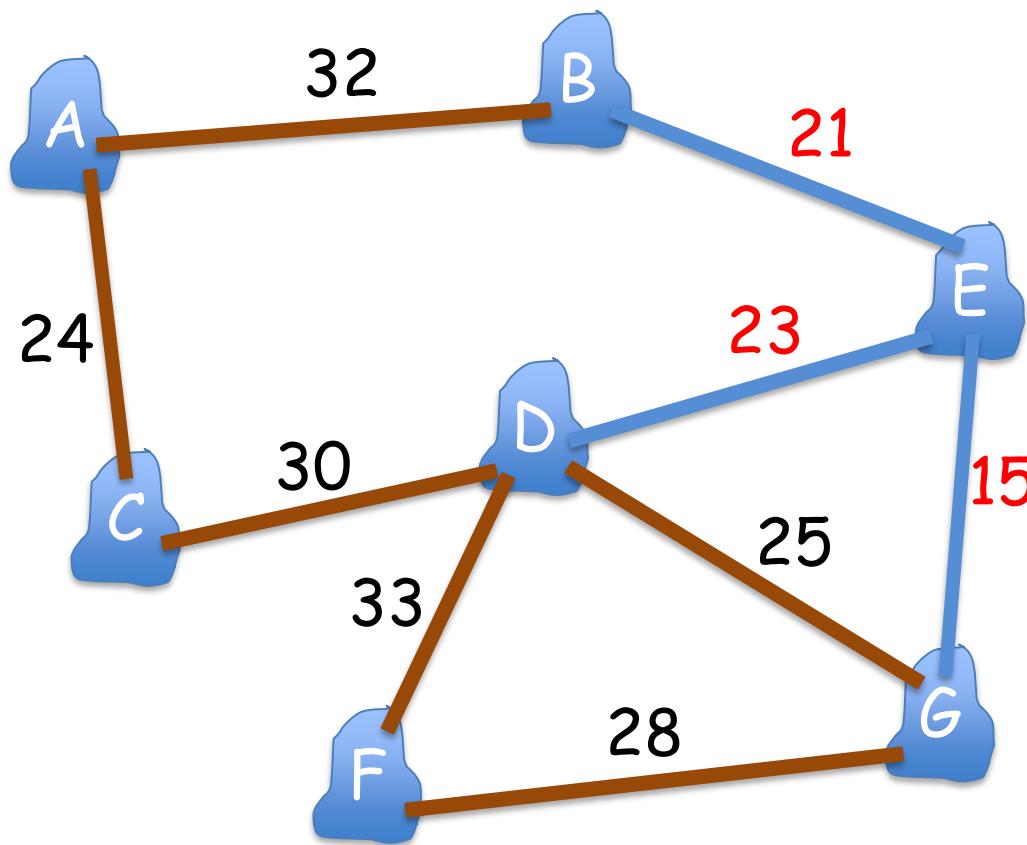

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

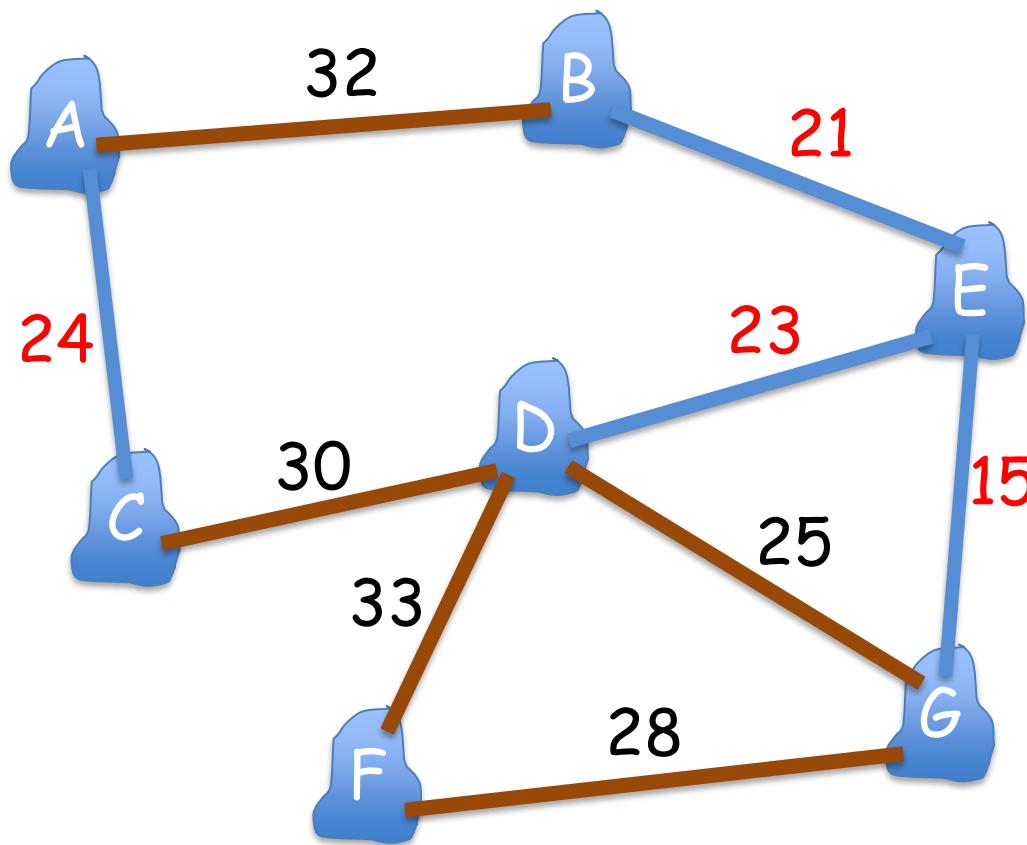

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

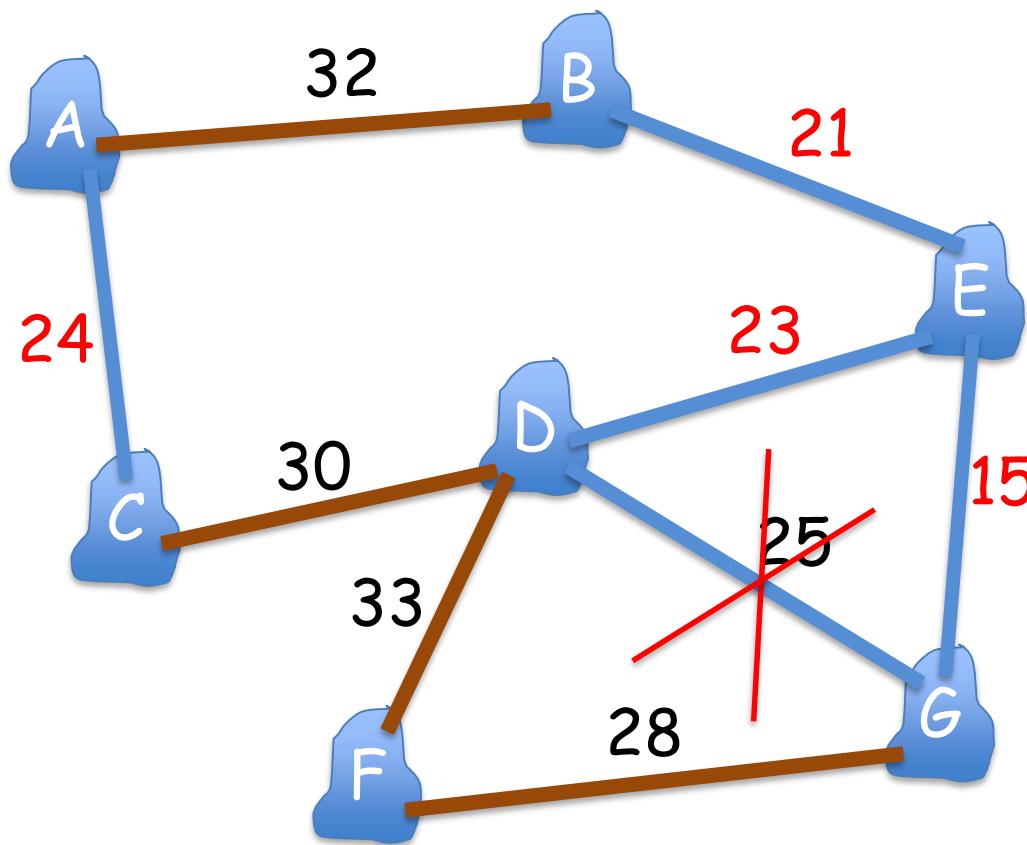

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

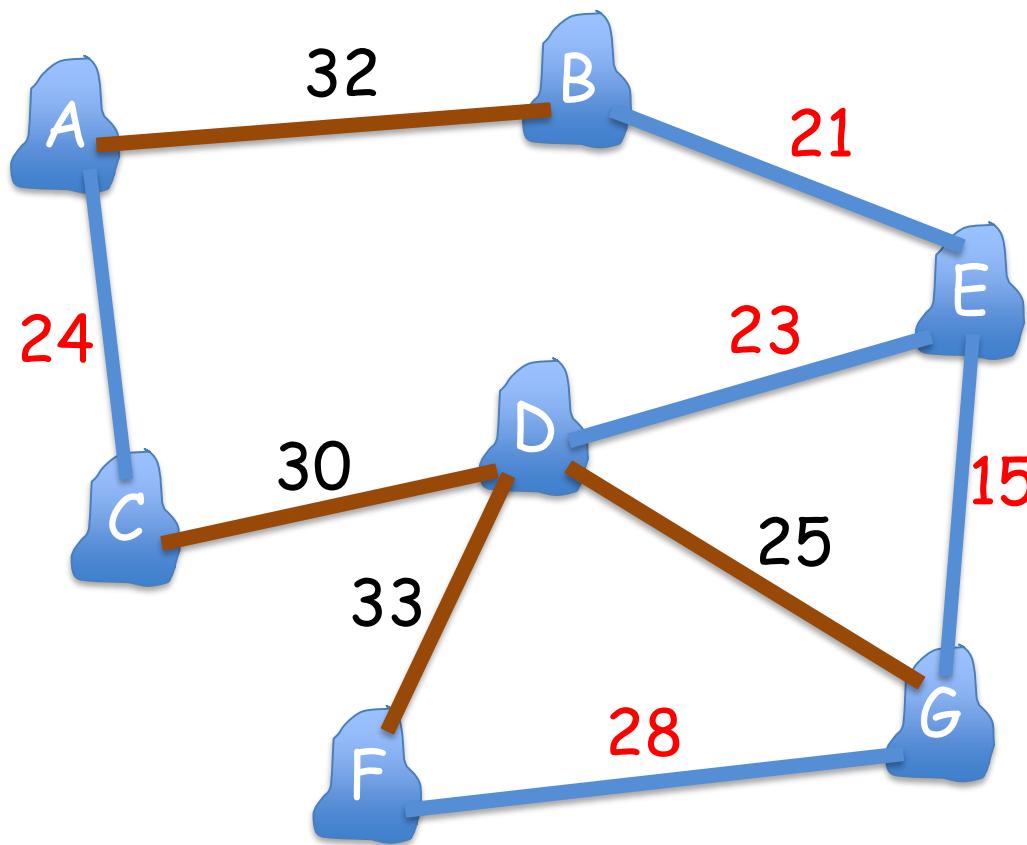

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

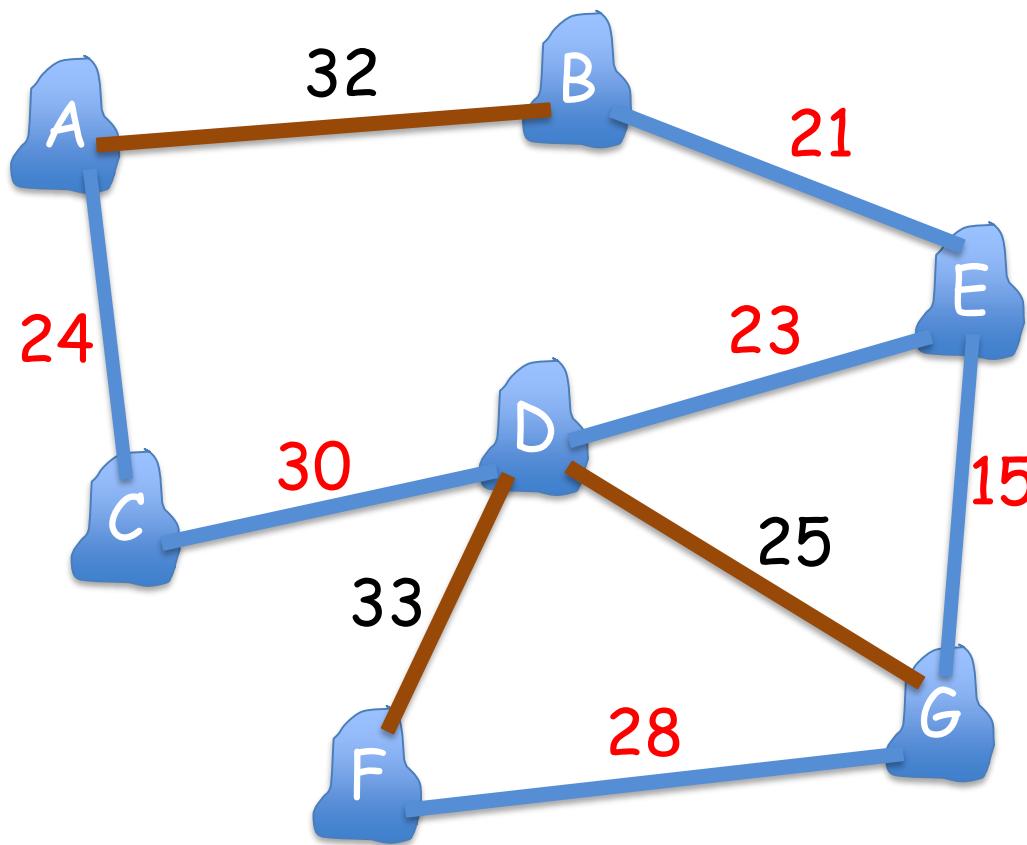

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

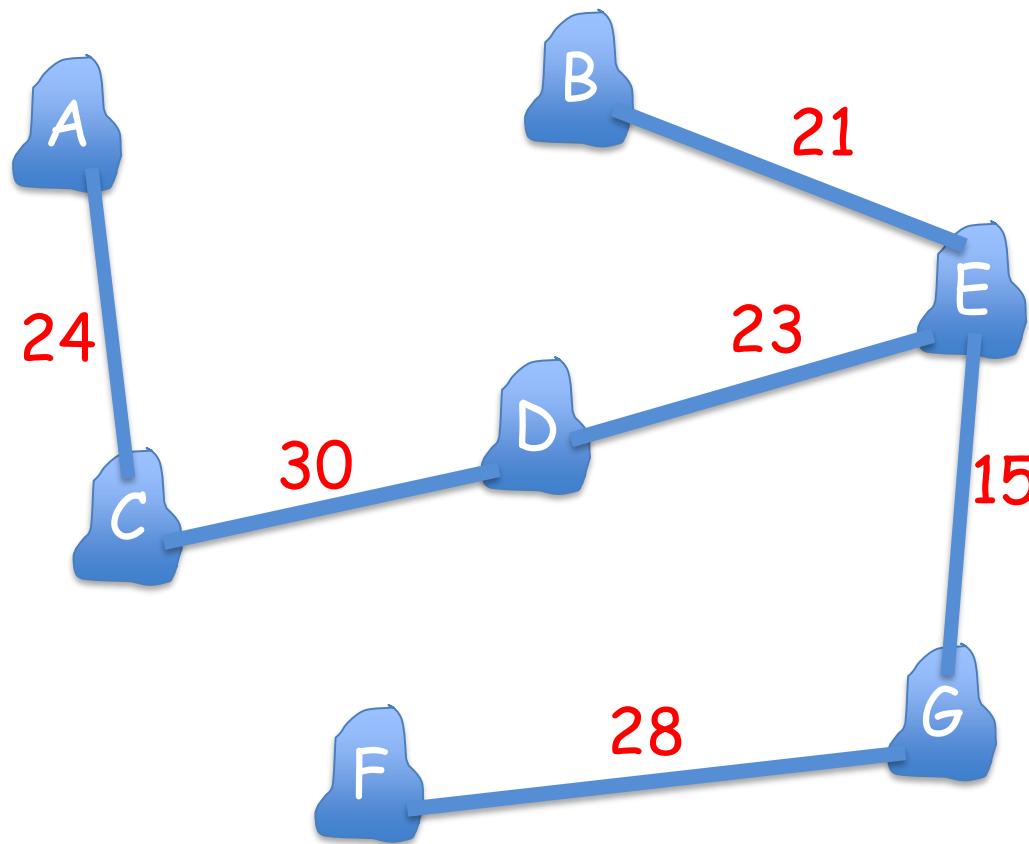

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$

## MST

- start with an empty set of edges  $A$
- repeat the following procedure  $|V| - 1$  times :  
add the lightest edge that does not create a cycle to  $A$
