

5.2. ANTİEKTOPARAZİTER İLAÇLAR (İNSEKTİSİTLER)

Veteriner hekimlikte önemli zararlılardan biride harici parazitlerdir. Bunlar kene, pire, bit, uyuz gibi parazitlerdir.

AMİTRAZ	AZAMETİFOS	BROMOPROPİLAT
 <p>N,N'-[(Metilimino)dimetiliden] di-2,4-ksilidin</p>	 <p>S-[(6-kloro-2,3-dihidro-2-okso-1,3-oksazolo[4,5-b]pridin-3-il)-metil]-O,O-dimetil-fosforotionat</p>	 <p>isopropil-4,4'-dibromobenzilat</p>
<p>LD₅₀ = 800 mg/kg 125 mg/ml stok çözelti 2 ml/L su ile karıştırılır</p>		<p>LD₅₀ = >5000 mg/kg Şerite emdirilmiş olarak bulunur. Yakılıp tütsü olarak kullanılır.</p>

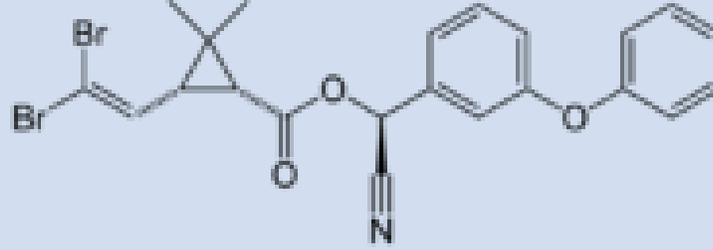

CYROMAZIN

N-Siklopropil-1,3,5-triazin-2,4,6-triamin

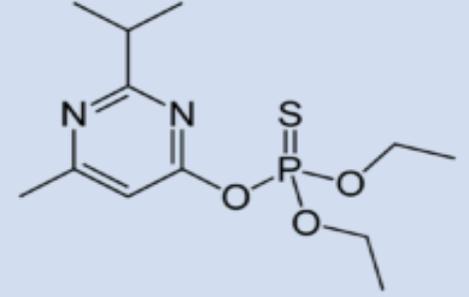

Kümes hayvanlarının yemlerine katılarak, sinek larvalarından arındırmak için kullanılır.

DELTAMETRİN

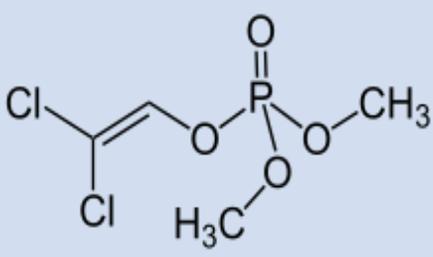

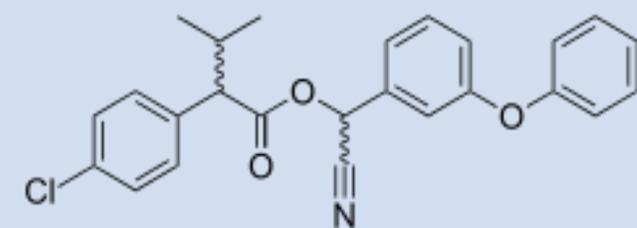

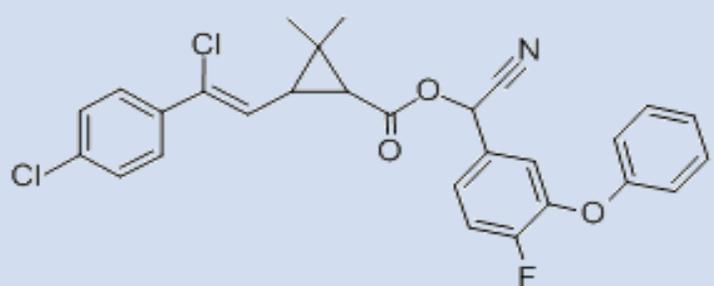

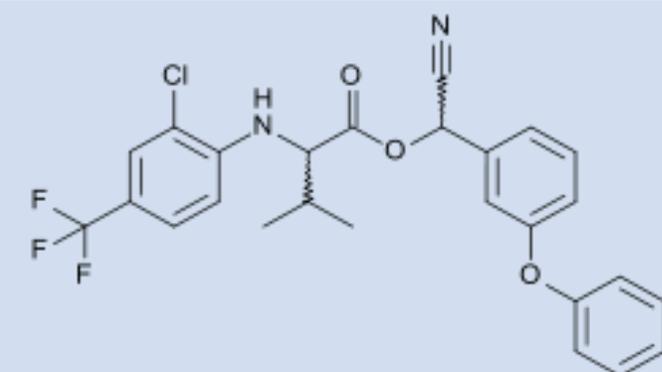

[(S)-Siyano-(3-fenoksifenil)-metil] (1R,3R)-3-(2,2-dibromoetenil)-2,2-dimetil-siklopropan-1-karboksilat

DİAZİNON

 <p data-bbox="114 1256 1082 1370">α-Siyano-4-floro-3-fenoksibenzil 3-[2-kloro-2-(4-klorofenil)vinil]-2,2-dimetilsiklopropankarboksilat</p>	 <p data-bbox="1217 1256 2051 1370">[Siyano-(3-fenoksifenil)metil] 2-[2-kloro-4-(triflorometil)anilino]-3-metilbutanoat</p>

• IVERMECTİN

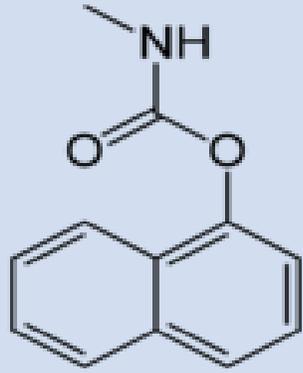

22,23-dihydroavermectin B1a + 22,23-dihydroavermectin B1b

Ivermectin (Cardomec, Eqvalan, Ivomec): Katalitik hidrojenasyon ile elde edilen Avermectin B1a ve B1b'nin 22,23-dihidro türevlerinin bir karışımıdır. Avermectin *Streptomyces avermitilis* den fermentasyon ile elde edilir. Ivermectin, hayvanları parazite eden çok çeşitli nematodlara ve eklembacaklılara karşı düşük dozajda aktiftir. İvermectin, hayvanları parazite eden çok çeşitli nematodlara ve eklembacaklılara karşı düşük dozajda aktiftir.

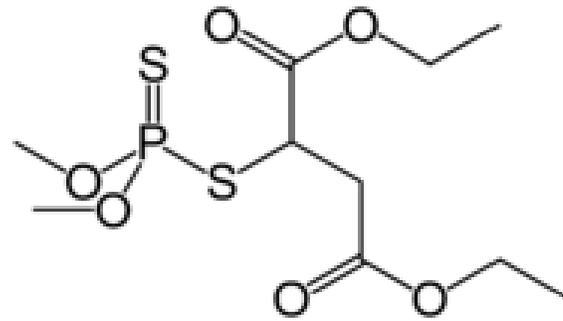

Ivermectin, evcil hayvanlarda endoparazitlerin ve ektoparazitlerin kontrolü için Amerika Birleşik Devletleri'nde ve dünya çapında birçok ülkede veterinerlik uygulamalarında yaygın bir kullanım sağlamıştır. İnsanlarda onkoserkiyazis ("nehir körlüğü") tedavisinde etkili bulunmuştur, 98 Batı ve Orta Afrika, Orta Doğu, Güney ve Orta Amerika'da yaygın olan yuvarlak kurt *Oncocerca volvulus*'un neden olduğu önemli bir hastalık.

Ivermectin, nematodun olgunlaşmamış formları olan mikrofilaryayı yok eder ve istilanın özelliği olan deri ve doku nodüllerini oluşturur ve körlüğe yol açabilir.

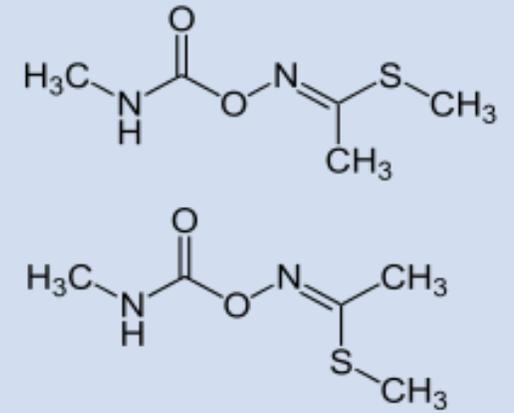

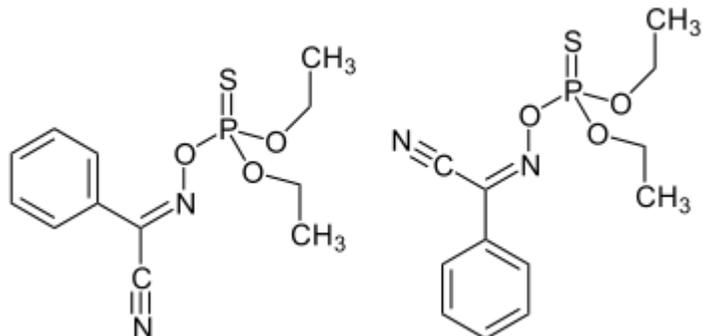

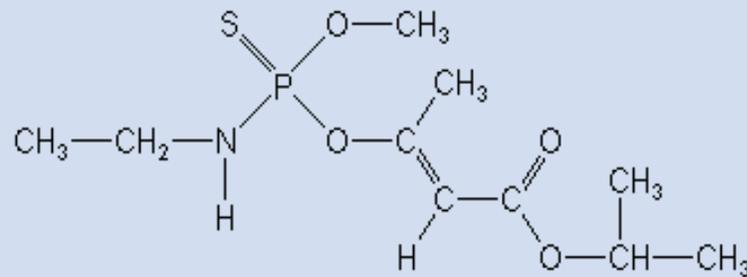

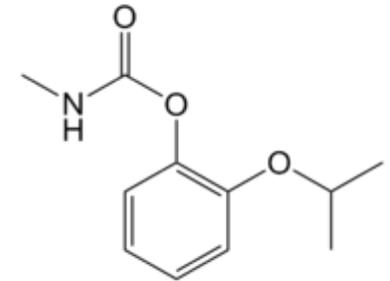

Ayrıca, konakta yaşayan yetişkin solucanlar tarafından mikrofilarya salınımını da engeller. İvermectinin etki mekanizması üzerine yapılan çalışmalar, inhibitör nörotransmitter GABA'nın salınımını uyararak nematodlarda interneuron-motor nöron iletimini engellediğini göstermektedir.

KARBARİL

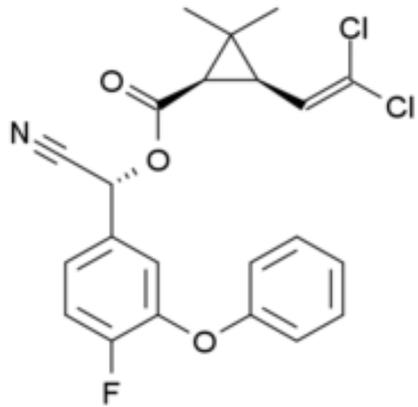

1-naftil-metilkarbamat

KOMOFOS

Diethyl 2-[(dimethoxyphosphorothioyl) sulfanyl]butanedioate

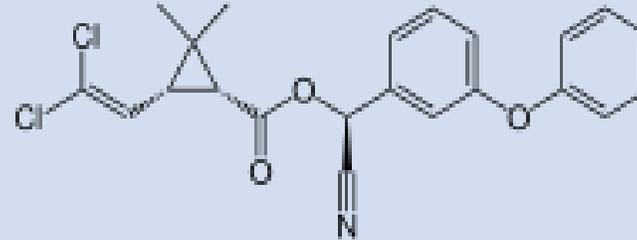

METOMİL(E,Z)-metil *N*-{[(metilamino)karbonil]oksi}etanimidotiyoat**FOKSİM (PHOXİM)**(E,Z)-*N*-[(Diethoxyphosphorothioyl)oxy] benzenecarboximidoyl cyanide**PROPETAMPHOS**(RS)-[(E)-*O*-2-isopropoxycarbonyl-1-methyl vinyl *O*-methylethyl phosphoramidothioate]**PROPOXUR**2-Isopropoxyphenyl *N*-methyl carbamate
