The screenshot shows the pgAdmin III interface. The Object browser on the left displays the database structure: Server Groups > Servers (1) > PostgreSQL 9.0 (localhost:5432) > Databases (1) > postgres > Catalogs (2) > ANSI (information_...).

The Properties tab is active, showing a table of catalog objects:

Type	Name	Restriction
Type	information_schema.cardi...	normal
Type	information_schema.mar...	normal
Type	information_schema.sq...	normal
Type	information_schema.time...	normal
Type	information_schema.yes...	normal
Function	information_schema.pg...	normal
Function	information_schema.pg...	normal
Function	information_schema.pg...	normal

The SQL pane at the bottom contains the following SQL commands:

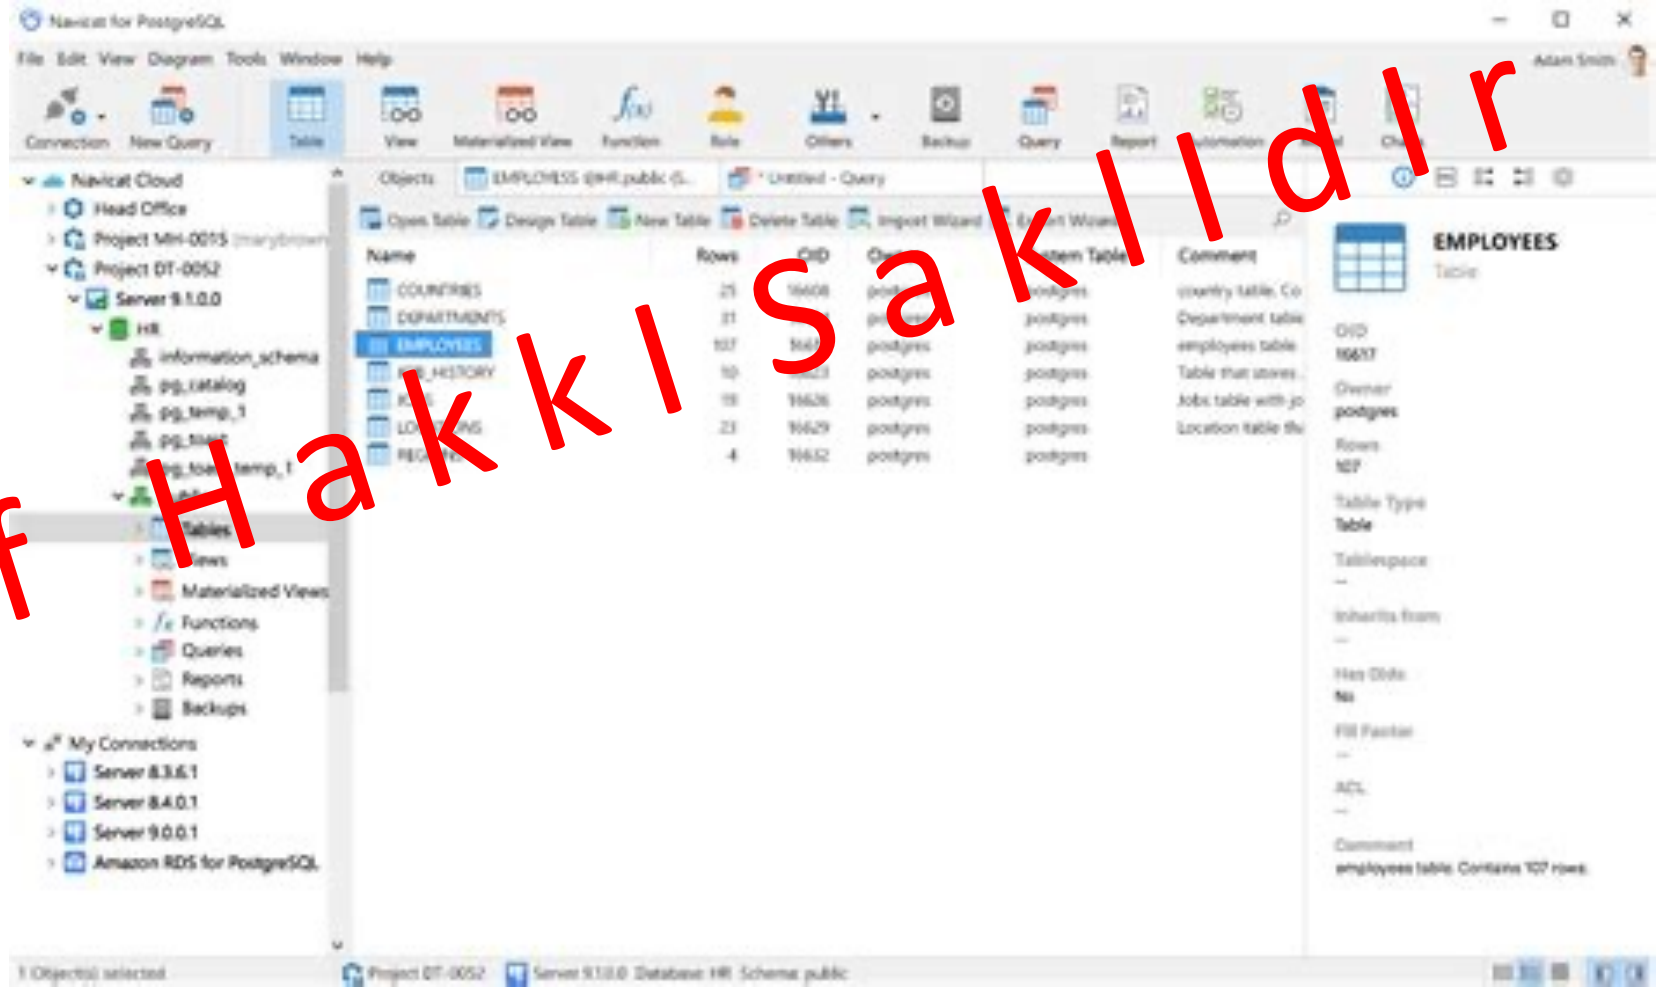

```
-- Catalog: information_schema
-- DROP SCHEMA information_schema;

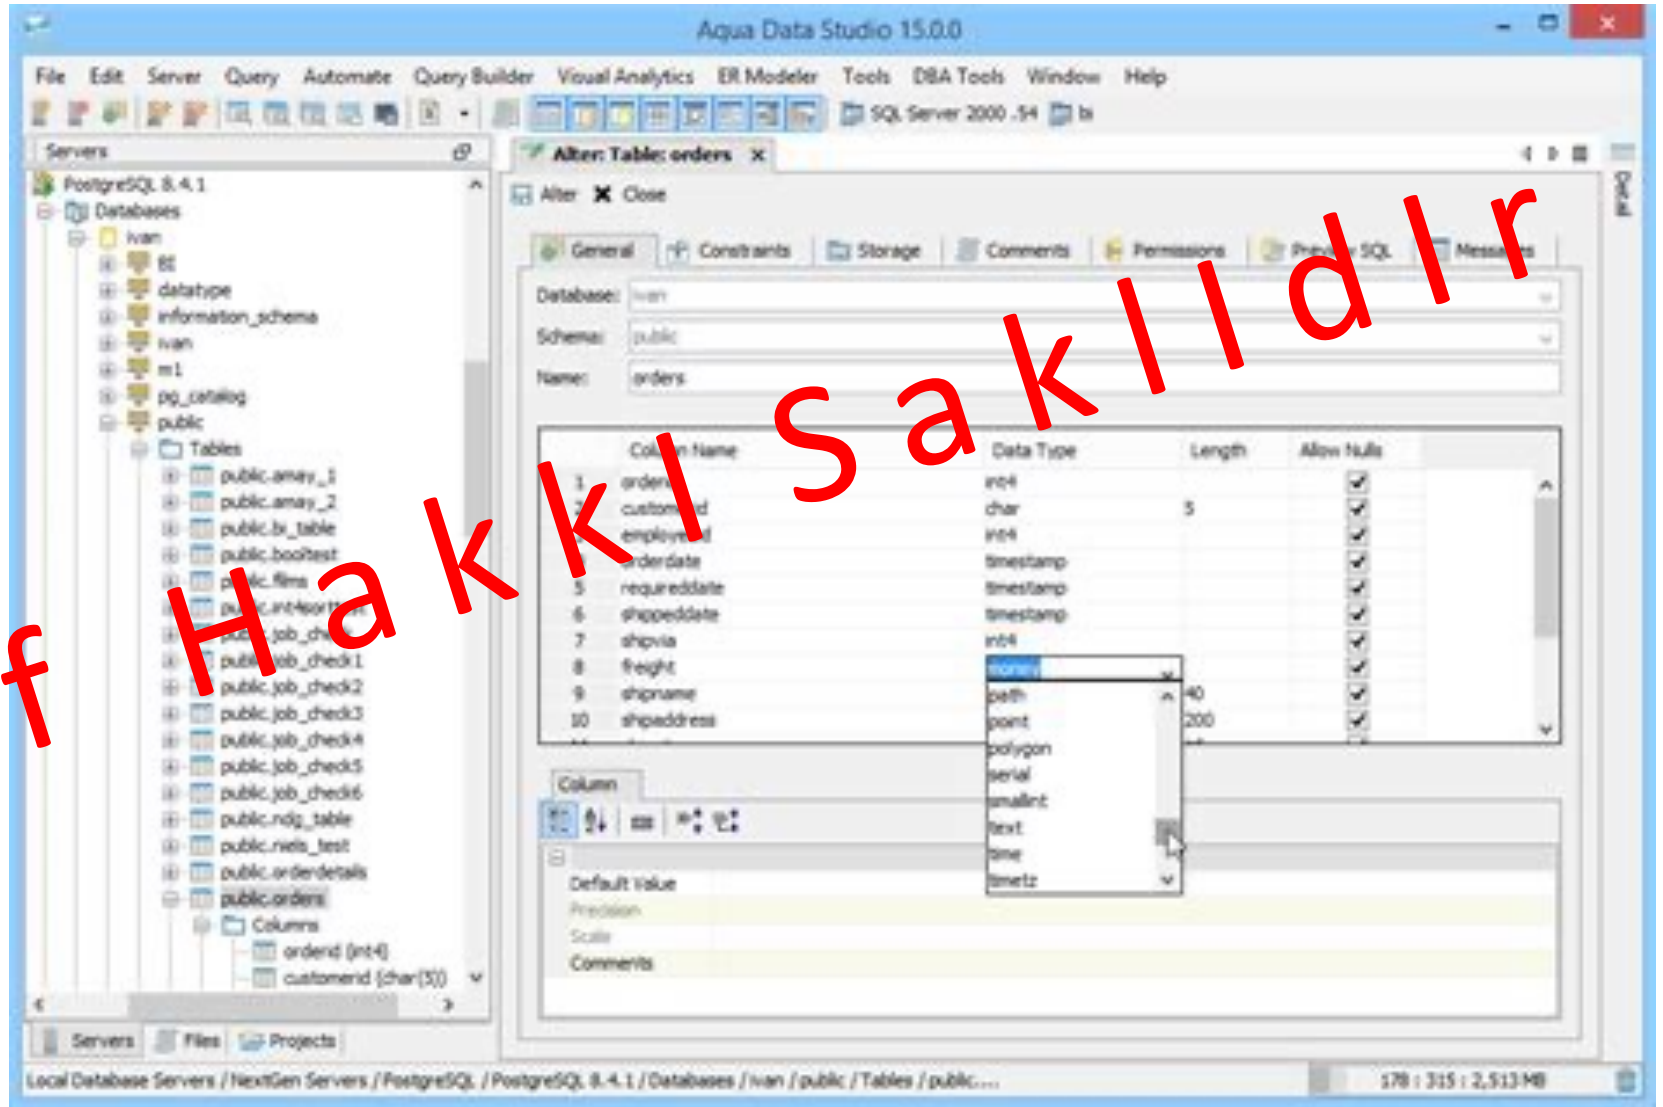

CREATE SCHEMA information_schema
  AUTHORIZATION postgres;

GRANT ALL ON SCHEMA information_schema TO postgres;
GRANT USAGE ON SCHEMA information_schema TO public;
```

The status bar at the bottom indicates "Retrieving Catalog details... Done." and "0.00 secs".
