## Classification of Luminescence Phenomena

### FLUORESCENCE

Instantaneous emission upon relaxation to the ground state, essentially independent of temperature

### PHOSPHORESCENCE

Involves metastable states, strong temperature dependence

→ Radiative transitions

→ Non-radiative transitions

→ Absorption

ELECTRONIC TRANSITIONS IN INSULATORS  
(Jablonski diagram)

# **Basic Discrimination: emission after excitation**

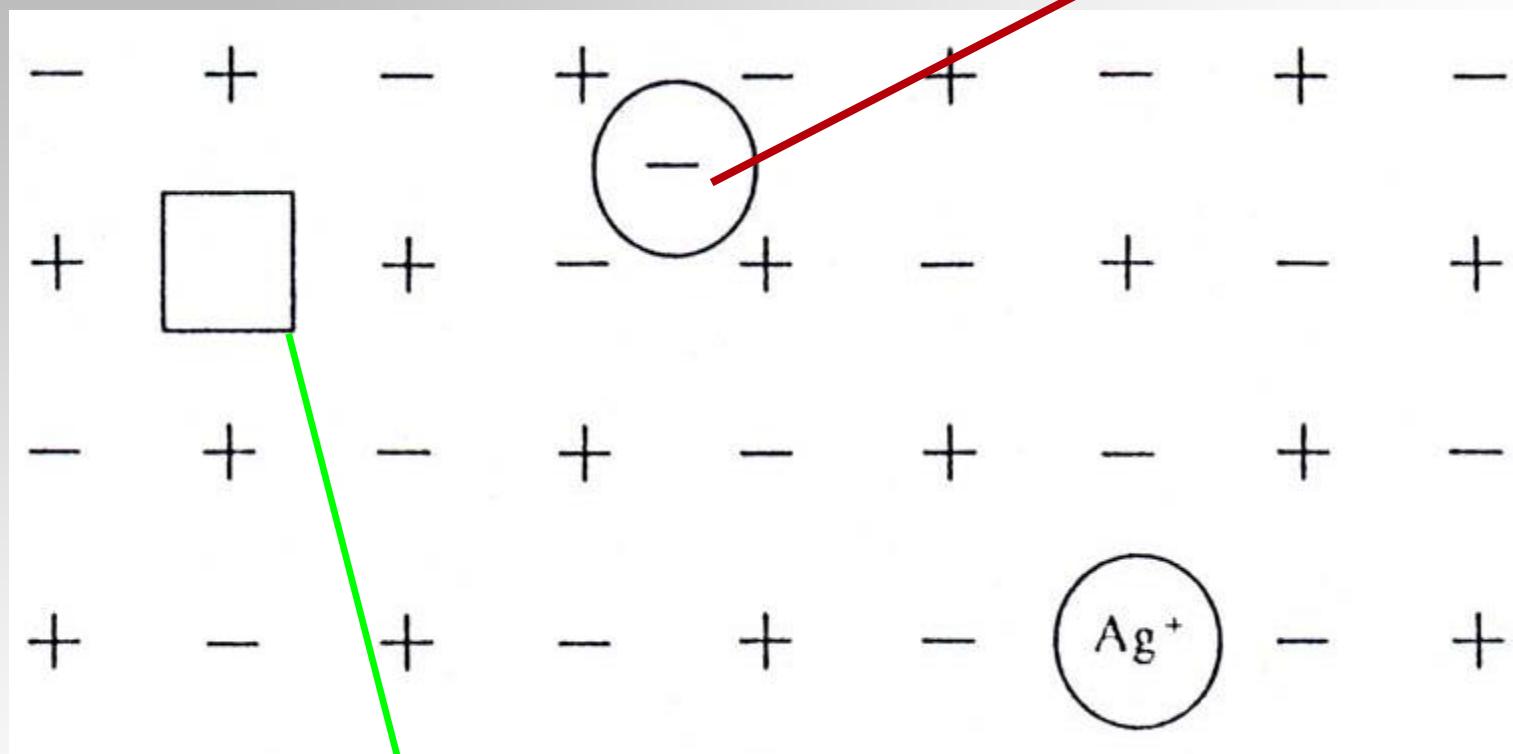

For  $\tau < 10^{-8}$  s → fluorescence (spontaneous, T-independent)

For  $\tau > 10^{-8}$  s → phosphorescence (requires stimulation, T-dependent)

Excitation = Irradiation

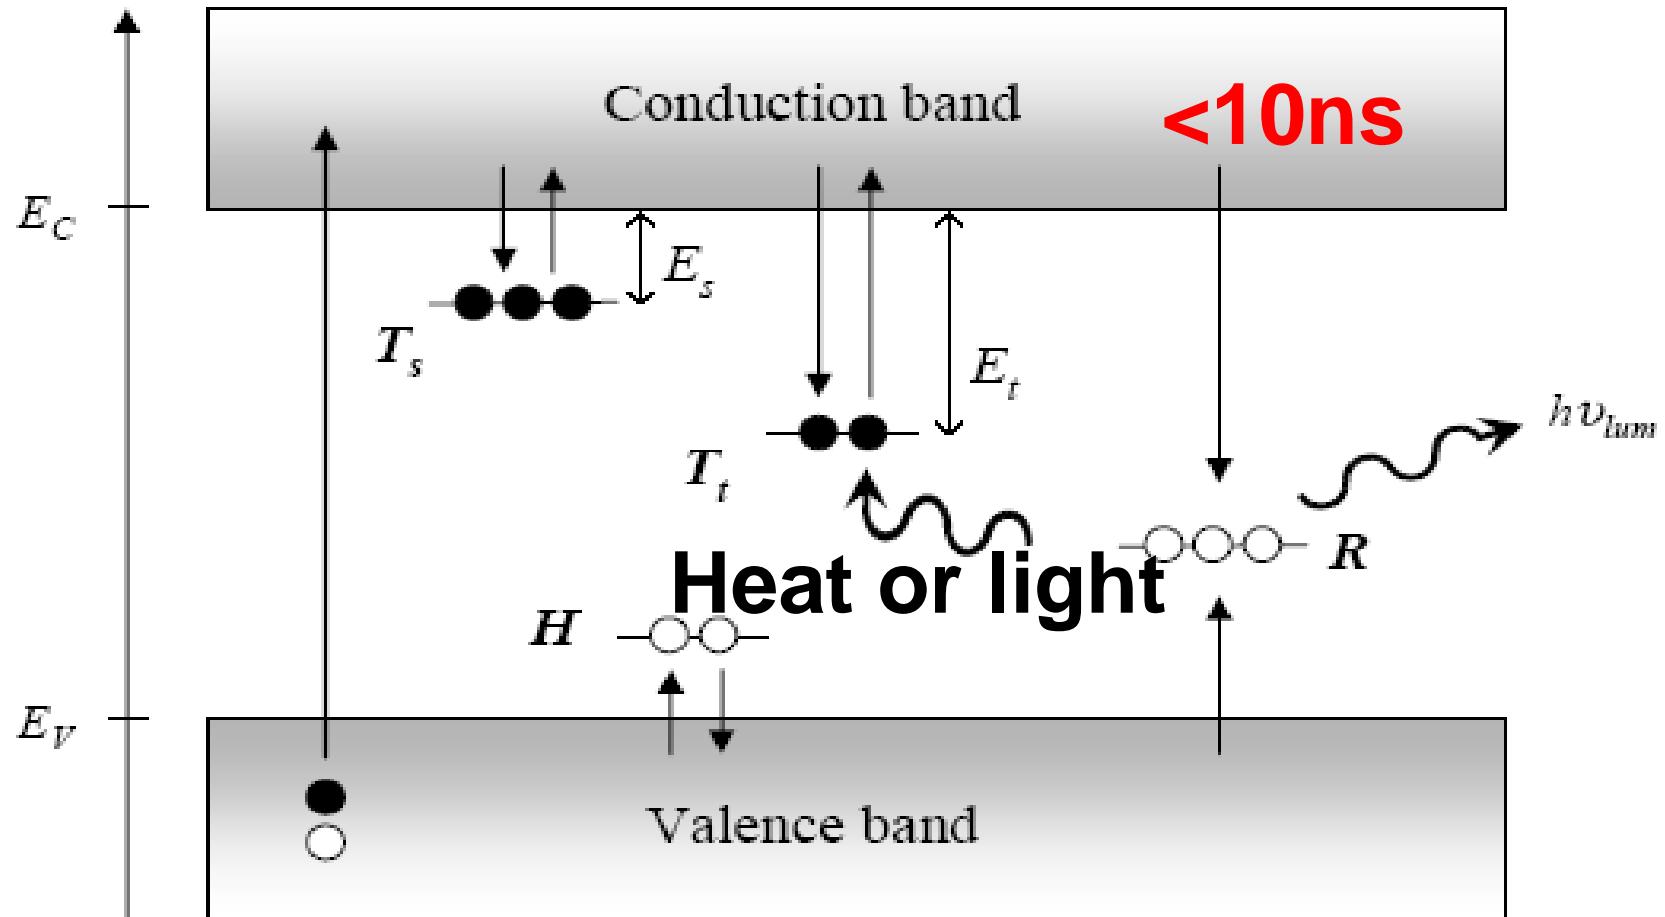

Stimulation = heating (TL), light (OSL)

- $\tau$  = lifetime =  $p^{-1}$

**Trap – recombination center**
