11. Week Cleaning an aquarium, main principles

12. Week Education: Aquarium world

13. Week General evaluation and discussion: About species exhibited in public aquariums

14. Week How to keep an aquarium fish healthy

An aquarium is an artificial enclosure filled with water used to serve as a habitat for fish or other marine organisms.

An aquarium range in size from small household aquariums meant for a few and small fish to huge ones that can hold millions of gallons of water and host animals as big as the whale.

It is believed that aquariums were initially built by prehistoric man for the purpose of storing his fish after catching.

However, the 18th century brought with it entrepreneurs who established some of the most famous aquariums in the world for both scientific research and entertainment purposes.
