Tibet (Qinghai-Xizang) Platosu iklimi

Tibet Platosu Orta Asya'da Çin Halk Cumhuriyeti sınırları içinde kalan ve yaklaşık 2,5 milyon km²'lik bir alan kaplayan, **dünyanın en büyük platosudur**. Ayrıca ortalama 4.000 m yükseltiyle de dünyanın en yüksek platosudur. Bu özelliğinden dolayı '**dünyanın çatısı**' olduğu ifade edilmektedir. Yükseltinin fazla olması atmosferin incelmesine ve sera gazı konsantrasyonunun azalmasına neden olduğu için hava sıcaklıkları alçak alanlara nazaran çok daha düşüktür. Tibet Platosu dünyanın en soğuk bölgeleri arasında bulunduğu için dolayı '**üçüncü kutup**' olarak da anılmaktadır. Tibet Platosu'nun bu denli ısı açığı vermesinin gerekçeleri yükselti ve karasallıktır.
