Scientific Research Solves a Case of Mistaken Identity

After years of research, scientists have identified the skull as belonging to a young child, not a Neanderthal as previously believed. The discovery was made in 1991 at a site in Croatia. The skull was found in a layer of earth that was dated to be between 40,000 and 50,000 years old. The skull was found in a layer of earth that was dated to be between 40,000 and 50,000 years old. The skull was found in a layer of earth that was dated to be between 40,000 and 50,000 years old.

The Layering of the Skeleton in the Nest of Eggs

The layering of the skeleton in the nest of eggs is a key feature of the fossil. It shows that the skeleton was buried in a layer of earth that was dated to be between 40,000 and 50,000 years old. The layering of the skeleton in the nest of eggs is a key feature of the fossil. It shows that the skeleton was buried in a layer of earth that was dated to be between 40,000 and 50,000 years old.
