```

dotnet aspnet-codegenerator identity -h
Usage: aspnet-codegenerator [arguments] [options]

Arguments:
  generator  Name of the generator. Check available generators below.

Options:
  -p|--project Path to .csproj file in the project.
  -m|--mcpet-package-dir Configuration for the project (Possible values: Debug/ Release)
  -c|--configuration Target Framework to use. (Short Folder name of the tfa, eg. net46)
  -t|--target-framework Target Framework to use. (Short Folder name of the tfa, eg. net46)
  -b|--build-base-path --no-build

Selected Code Generator: Identity

Generator Options:
  -dbcontext|-dc : Name of the DbContext to use, or generate (if it does not exist).
  -files|-f : List of semicolon separated files to scaffold. Use the --list-files option to see the available options.
  --list-files|-lf : Lists the files that can be scaffolded by using the --files option.
  --userclass|-uc : Name of the user class to generate.
  --useSqlite|-sqlite : Flag to specify if DbContext should use SQLite instead of SQL Server.
  --force|-f : Use this option to overwrite existing files.
  --useDefaultUI|-sdui : Use this option to setup Identity and to use Default UI.
  --layout|-l : Specify a custom layout file to use.
  --generateLayout|-gl : Use this option to generate a new layout.cshtml
  --bootstrapVersion|-b : Specify the bootstrap version. Valid values: '3', '4'. Default is 4.

```

```

dotnet aspnet-codegenerator identity -dc Eticaret.Data.VeritabaniContext --files "Account.Register"
dotnet aspnet-codegenerator identity -dc Eticaret.Data.VeritabaniContext --files "Account.Login/Account.Logout"
