メロト メポト メヨト メヨト

Definition

Antiderivative A function F is an antiderivative of f on an interval I if F'(x) = f(x) for all x in I.

Example

An antiderivative of
$$f(x) = x$$
 is $F(x) = \frac{x^2}{2}$.

э

- ∢ ∃ →

Theorem

Let G be an antiderivative of a function f. Then, every antiderivative F of f must be of the form F(x) = G(x) + C, where C is a constant.

3

イロト 不得下 イヨト イヨト

The process of finding all antiderivatives of a function is called antidifferentiation, or integration. We use the symbol \int , called an integral sign, to indicate that the operation of integration is to be performed on some function f. Thus,

$$\int f(x) \, dx = F(x) + C$$

Example $\int x \, dx = \frac{x^2}{2} + C$

•
$$\int k \, dx = kx + C$$

• $\int x^n \, dx = \frac{1}{n+1}x^{n+1} + C \quad n \neq -1$
• $\int kf(x) \, dx = k \int f(x) \, dx$
• $\int f(x) \pm g(x) \, dx = \int f(x) \, dx \pm \int g(x) \, dx$
• $\int e^x \, dx = e^x + C$
• $\int x^{-1} \, dx = \ln |x| + C$

メロト メポト メヨト メヨト

Example

Find the function f if it is known that $f'(x) = 3x^2 - 4x + 8$ and f(1) = 9.

Example

Find the function f if it is known that $f'(x) = 3x^2 - 4x + 8$ and f(1) = 9.

Example

In a test run of a maglev along a straight elevated monorail track, data obtained from reading its speedometer indicate that the velocity of the maglev at time t can be described by the velocity function

 $V(t) = 8t \ (0 \le t \le 30).$

Find the position function of the maglev. Assume that initially the maglev is located at the origin of a coordinate line.

- Step 1 Let u = g(x), where g(x) is part of the integrand, usually the inside function of the composite function f(g(x)).
- Step 2 Find du = g'(x) dx.
- Step 3 Use the substitution u = g(x) and du = g'(x) dx to convert the entire integral into one involving only u.
- Step 4 Evaluate the resulting integral.
- Step 5 Replace u by g(x) to obtain the final solution as a function of x.

Integration by Substitution

Example

Find

$$\int 3x^2(x^3+1)^4 \ dx.$$

æ

(日) (周) (三) (三)

Integration by Substitution

Example

Find

$$\int 3x^2(x^3+1)^4 \, dx.$$

Example

A study prepared by the marketing department of Universal Instruments forecasts that, after its new line of Galaxy Home Computers is introduced into the market, sales will grow at the rate of

$$2000 - 1500e^{-0.05t}$$
 ($0 \le t \le 60$)

units per month. Find an expression that gives the total number of computers that will sell t months after they become available on the market. How many computers will Universal sell in the first year they are on the market?

Integration by Parts

or
$$D_{x}(u(x)v(x)) = u(x)v'(x) + u'(x)v(x)$$
$$u(x)v'(x) = D_{x}(u(x)v(x)) - u'(x)v(x)$$

2

イロト イヨト イヨト イヨト

$$D_x(u(x)v(x)) = u(x)v'(x) + u'(x)v(x)$$

or

$$u(x)v'(x) = D_x(u(x)v(x)) - u'(x)v(x)$$

By integrating both sides

$$\int u(x)v'(x) \ dx = u(x)v(x) - \int u'(x)v(x) \ dx$$

2

イロト イヨト イヨト イヨト

$$D_x(u(x)v(x)) = u(x)v'(x) + u'(x)v(x)$$

or

$$u(x)v'(x) = D_x(u(x)v(x)) - u'(x)v(x)$$

By integrating both sides

$$\int u(x)v'(x) \ dx = u(x)v(x) - \int u'(x)v(x) \ dx$$

since dv = v'(x)dx and du = u'(x)dx we get

æ

イロト イ理ト イヨト イヨトー

$$D_x(u(x)v(x)) = u(x)v'(x) + u'(x)v(x)$$

or

$$u(x)v'(x) = D_x(u(x)v(x)) - u'(x)v(x)$$

By integrating both sides

$$\int u(x)v'(x) \ dx = u(x)v(x) - \int u'(x)v(x) \ dx$$

since dv = v'(x)dx and du = u'(x)dx we get

$$\int u \, dv = uv - \int v \, du$$

æ

イロト イ理ト イヨト イヨトー

Example

Find $\int x \cos(x) dx$.

Example

Find $\int \ln(x) dx$.

Example

Find $\int e^x \sin(x) dx$.
