

# FISHING METHODS

PROF. DR. HASAN HÜSEYİN ATAR

## TRAWL-NET

- Trawling takes second place after purse seine in our country. In addition to the nets that are used, it is a very economical method of fishing because human power is not needed much.

- Efficient Trawling;

Good cutting and fitting of nets

Good design of the doors and their connections that allow the trawl net to open in the desired way

Dimensions and characteristics of trawl net

The power, tonnage and size of the craft that will attract the trawl is important.

## TRAWL OPERATION

- When there is a suitable bottom floor for trawling done day and night, the trawl is thrown into the sea by moving it from the roller at the back of the ship to start from the bag. When the trawl arrives, it is allowed to rise and float on the net and over, and the boat is released and the boat is given a speed of 3 mph.

# TRAWL DOORS
