

# Gill-net Fishing

Prof. Dr. Hasan ATAR

# Gill-nets

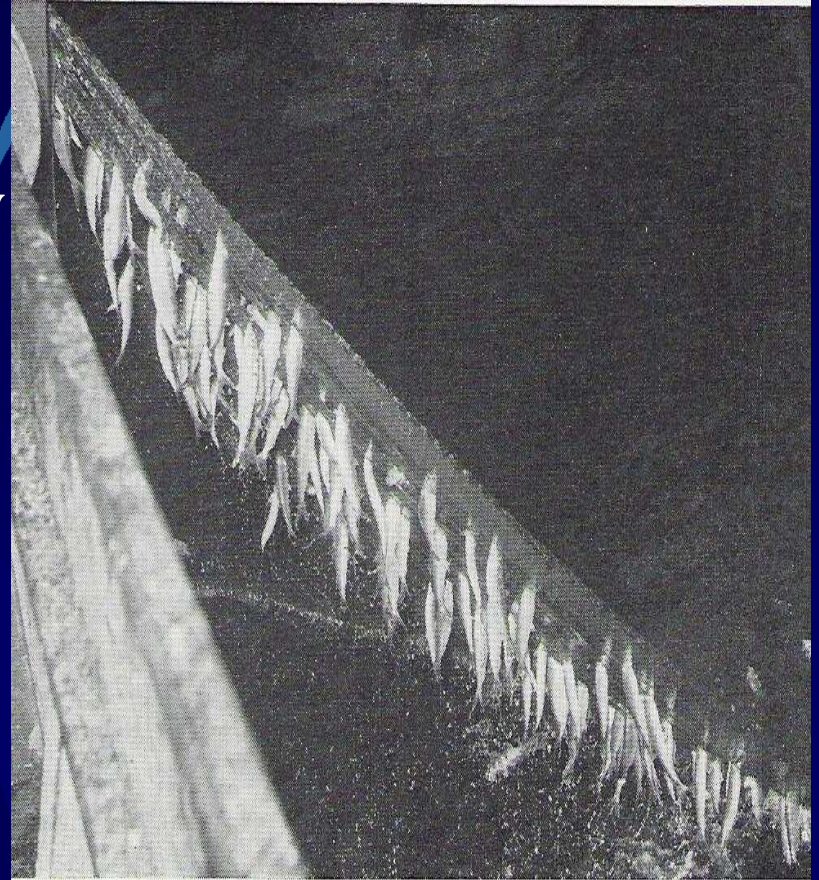

It is well known that fish caught by nets. Fish try to pass the net than tangled by their head.

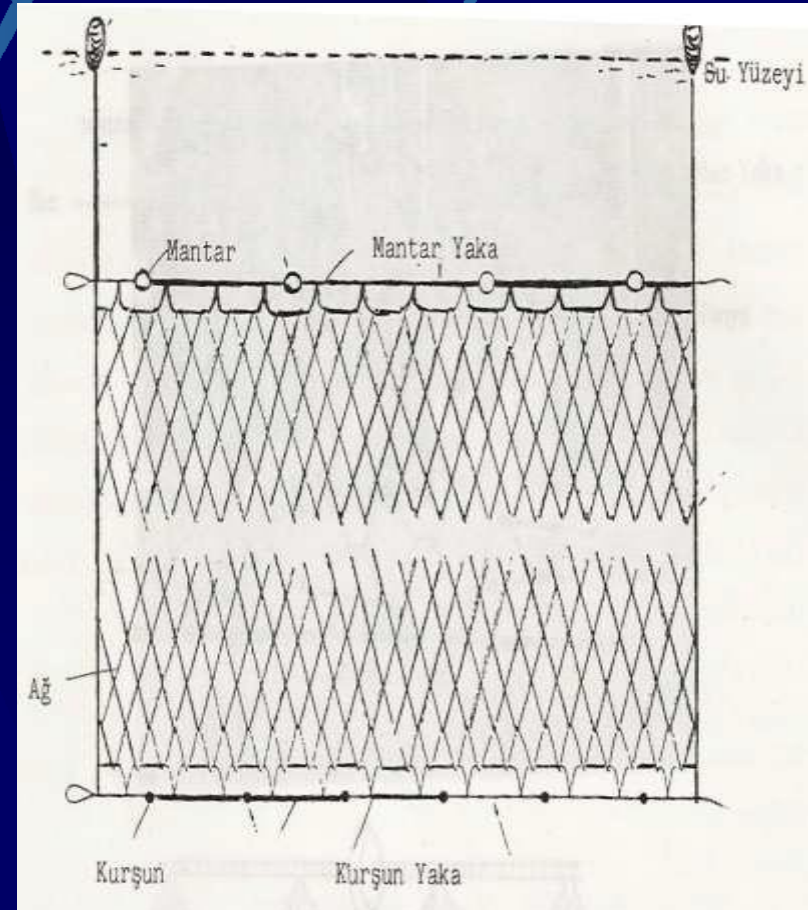

When the fish try to escape more tangled. The mesh strongly hold the fish from head and not to permit move forward and back

The fish which is trying to escape get entangled mainly from the gills. That's why this type of nets called as Gill-nets.

Gill-nets are equipped between the float line and lead line

• Their height and length is depended on the target fish species.
